Before Brainwave Training

Severe Processing Issues

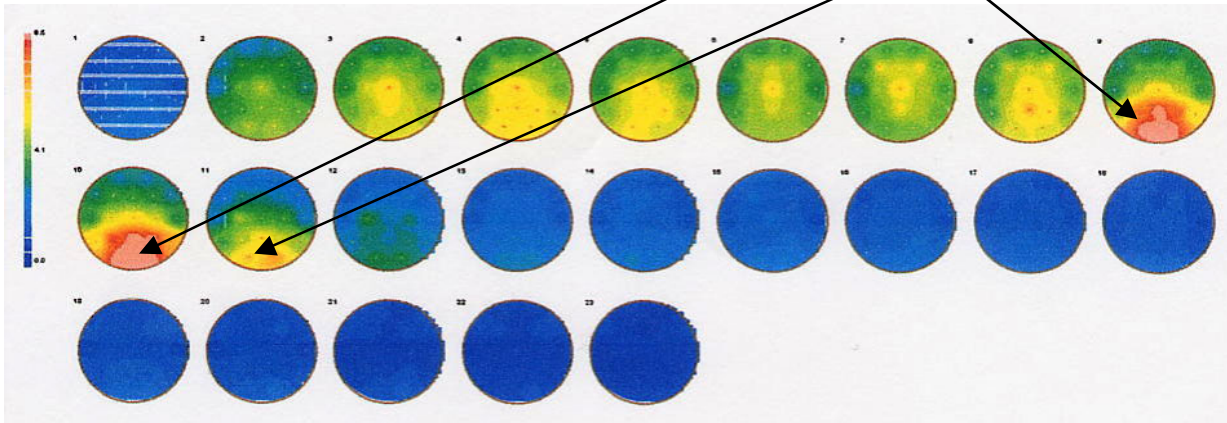

Fig: 5. Topographic Map Displayed in 1 Hz Frequency Bands with Eyes Open, from the First EEG. There is 9-11 Hz dominant frequency activity in posterior regions, with the voltage set at 8.5 μ V.

After Brainwave Training

Processing Issues Resolved

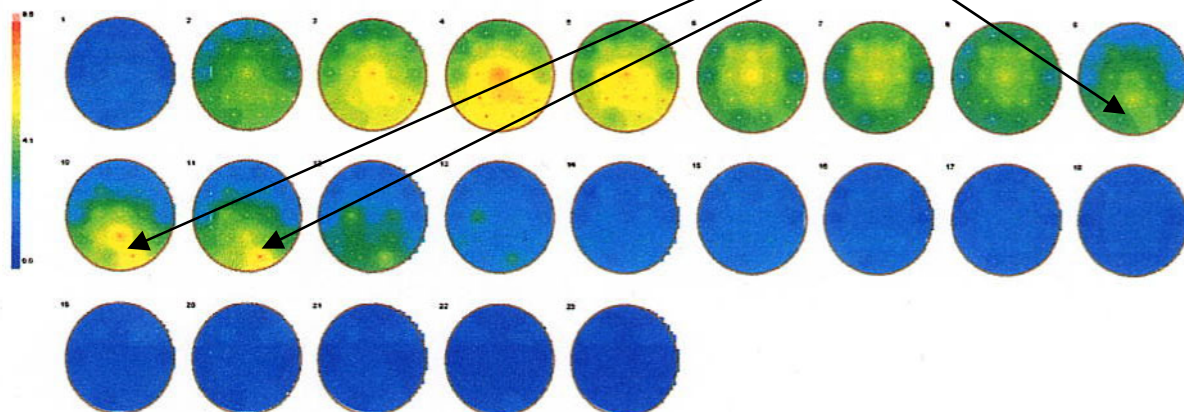

Fig: 6. Topographic Map Displayed in 1 Hz Frequency Bands with Eyes Open, from the Second EEG. The voltage setting remains at 8.5 μ V, and the 9-11 Hz dominant frequency activity seen in the first EEG is no longer present.
